

## IPL - HAIR REMOVAL

### **IPL Flash light technology**

Short, intense light pulses effectively destroy the hair.  
The treatment is pain free.

### **Treatment procedure**

Only hair in the growth phase can be treated, therefore several treatments are necessary.  
For a good result, 6-12 treatments are required every 4-6 weeks.

The treatment is not possible on freshly tanned skin, dark skin as well as blond or white hair.

### **Advantages:**

- No ingrown hairs already after the 1st treatment.
- Shaving is allowed between treatments.
- Lightening of the skin during reddening, rhinitis, pigmentation, sun spots and acne scars.
